StarDR™ --

Starnet's Comprehensive Disaster Recovery/ Business Continuity Managed Service

The Problem: Disasters

Business enterprises in Southern California are faced with the continuous threat of disasters, both natural and man-made, that could pose disastrous consequences to their ongoing operation.

The threat from earthquakes, fires and the like is omnipresent. And the consequences of business disruption as a result of a major disaster can be such that an enterprise may never be able to recover.

It is well documented that enterprises that are unable to have access to their data for extended periods of time run the risk of losing customers, credibility and competitive positioning.

The Solution: StarDR™

StarDR™ is Starnet's suite of products and services designed to assist customers in protecting data in electronic format such that recovery and rapid access in the event of a DISASTER are easily achieved.

Elements of StarDR™:

- ❖ **iSCSI SAN Implementation** - Consolidation of local storage onto an iSCSI SAN array to facilitate storage management, virtualization, data replication and efficient Disaster Recovery
- ❖ **SAN Array-Based Block Level Data Replication** – Periodic block-level data replication from your location to a secure hosted facility in Phoenix, AZ
- ❖ **Starnet Implementation, Management & Support** - From initial concept to full operation, Starnet will assist in insuring that your organization will have access to your data in Phoenix in the event of a disaster that disrupts your Southern California operation

StarDR™ --

Starnet's Comprehensive Disaster Recovery – Business Continuity Managed Service

Executive Overview –

In 2009, business enterprises face numerous challenges in managing the ever-increasing volumes of electronic data being generated as a by-product of standard day-to-day operation. Enterprises in Southern California are also faced with the additional consideration of planning for Business Continuity in the face of a geographic environment prone to numerous forms of 'disasters' that can impact an enterprise's ability to operate. A critical component of Business Continuity is the assured access to corporate electronic data and applications by company personnel, customers and business partners in the event of a 'disaster'.

Numerous technologies exist today ----

- Server Virtualization
- Storage Virtualization
- Block-level Data Replication
- Physical to Virtual Conversion
- Volume Cloning
- SSL-VPN Secure Remote Access
- "Bare Metal" Server Imaging
- Virtual Machine Portability
- Core Application Hosting
- Telecommunications Disaster Recovery (VoIP)

---- which can enable "Business Continuity" to be established efficiently and cost-effectively.

STARNET is well-positioned to offer customers in Southern California a comprehensive Disaster Recovery/Business Continuity managed service.

With 22 Years experience delivering data/voice/video/mobility solutions to the marketplace, office presence in both Southern California and Arizona, a secure hosting location in Phoenix and strong expertise in the areas of server and storage management, virtualization, consolidation -- we have conceived StarDR™.

If your Southern California organization has requirements for enhancing its ability to maintain IT operations in the event of a disaster, or you are interested in implementing any of the technologies mentioned above please contact us.
