

Did You Know...?

Starnet offers numerous IT-related services in support of many of today's complex IT operational issues.

SOS -Gold (Starnet's Comprehensive Strategic Ongoing Service Offering) –
Reactive – Proactive – Quarterly Project – Server Monitoring

StarCONVERGE™ –
Converged Voice/Data Practice

StarVIEW™ –
Real Time Application Performance Monitoring

StarASSURE™ –
Managed Voice over IP Services

StarSCOPE™ –
Internet Security and Bandwidth Utilization Assessment

StarWATCH™ –
Remote Network Monitoring

StarDR™ –
Disaster Recovery – Business Continuity Managed Service

StarSECURE™ –
Firewall, VPN, 2-Factor Authentication, Content Filtering, Secure Proxy, IDP

--- Protect your network resources and corporate assets from external attack and internal abuse ---

StarSECURE™ --

LAN Infrastructure Security and Policy Management

The Problem: Network Security Breaches

Today's technological advances in network infrastructure enable access to a wealth of business information on demand. However, together with this ready access comes the threat of security breaches that can disable your networks, maliciously destroy valuable data in a flash and cost your organization valuable time, financial and operational resources.

Acquiring a full security solution that covers all aspects of network communications can be costly, especially if taken from varied providers.

The Solution: StarSECURE™

StarSECURE™ is array of products and services forming a solution designed to help you shield your network resources and corporate assets from external attack and abuse. It provides a layer of secure, custom-designed programs that meet your needs and fit your budget.

Elements of StarSECURE™:

- **Secure Remote Access via IPSEC VPN Technology** allows you to create secure connections between your office and for branch offices, telecommuters and business partners, creating where you may conduct private business.
- **Secure Remote Access via SSLVPN Technology** enables remote users to securely access corporate resources without the need of client software installation and support.
- **Secure Remote Access via Certificate Management and Control** ensures secure correspondence with specific individuals and businesses.
- **Secure Remote Access with Two-Factor Auth.** enables remote users to be authenticated by 2 methods – what they know (password) and what they have (token).

➤ **Secure Internet Access**

- **Firewalls** provide a front-line defense against would-be hackers and attackers that prey upon your corporate data and resources.
 - **Packet Shaping and Application Pruning** protects your critical applications, bandwidth needs and control or completely filter out unwanted traffic.
 - **Content Filtering and Malware Blocking** provides control over internal Internet surfing habits, passive (i.e., block & forget) or active (i.e., logging violations & tracking user activity). This also helps to prevent legal action and preserves bandwidth for corporate-oriented activity.
- **Secure Proxy** enables policy control over outbound internet access to monitor users and insure they are adhering to internet usage policies. Generate reporting to maintain documentation for internet usage.
- **Remote Security Device and Server Monitoring (See StarWATCH)**
- **Network Security Audit** Evaluate your current security structure for an in-depth understanding of where your network defense procedures stand.
- **Secure Email-Spam Control, EMAIL Content Filtering and Email Attachment Inspection**

Our Secure E-Mail Service partner (Mcafee/MXLogic) provides a layer of protection at your network's "first point of entry/last point of exit" location. MXLogic services enable:

1. Easily enforce message filtering based on end-user or domain addresses, message size, and attachment type.
2. Strip specified attachments from Internet e-mail messages.
3. Block spam and other unwanted messages by domain.
4. Control and filter messages based on keywords or industry-specific lexicons.
5. Strip portions of message headers before releasing the message to the Internet.
6. Detect, clean and/or quarantine viruses for both inbound and outbound messages.

*** To activate any element of StarSECURE™ in your organization, please get in touch with a Starnet Business Development Manager today.**
